

Import Bulk Data into Fusion using PLSQL

Logic Implemented:

1. Prepare SOAP Payload for importBulkData of ERP Integration Service.
2. Invoke importBulkData operation of ERP Integration Service & Receive SOAP Response.
3. Parse SOAP Response to get the request Id for Load Interface File for Import ESS Job

Note :

- Preparing SOAP payload involves a few of the important aspects:
 - ✓ Base64 encoding of the FBDI zip containing CSV(s).
 - ✓ Parameters List
 - ✓ Job Options
- Parsing of SOAP Response
 - ✓ APEX_WEB_SERVICE.PARSE_XML is not working with XPATH Expression to derive the request id for Load Interface File for Import ESS Job.
 - ✓ As a work around through REGEXP_SUBSTR, SUBSTR, INSTR to derive the request id for Load Interface File for Import ESS Job.
